

Managing printers across multiple locations can be frustrating for both IT and end-users

Struggling to keep up with helpdesk calls from users working across different offices or departments who can't connect to a printer?

Take print to the cloud. It's just simpler.

EveryonePrint Hybrid Cloud Platform (HCP) has the ability to set location-aware printers, enabling users to seamlessly and securely access a printer, regardless of network or location.

- ◆ Simplify print fleet management
- ◆ Enable printer access without IT intervention
- ◆ Eliminate time-consuming helpdesk calls

Make print less complex

Accommodating users who work across different locations and require access to printers can be challenging and time-intensive for IT to manage.

HCP's location-aware printing functionality simplifies managing print queues and print drivers

◆ Easier administration

HCP removes the need for IT administrators to map and assign print queues for users. It's easy to manage printer deployment, configure default settings and control access from a central point.

◆ Make printing simple

End-users have access to printers without having to install devices or drivers. HCP's location-aware platform automatically discovers and shows users the available printers at their location, allowing them to print immediately, wherever they are.

◆ Eliminate helpdesk calls

HCP can help to reduce print-related helpdesk tickets, removing the requirement for IT to set-up new printers or print queues for each location. The HCP PC Client automatically manages devices based on administrators' settings.

◆ Reduce IT burden

By removing print driver and printer mapping requirements, HCP streamlines and simplifies the new user on-boarding process. Available printers are automatically added and those that are no longer available are automatically removed, making it impossible to print to a device that is not at a users' current location.

◆ Lower costs

Organizations benefit from cost savings associated with allocating expensive IT resources for administration and ongoing support for the print infrastructure.

◆ Boost productivity

Users that regularly work in multiple branches, offices or departments and who move across networks can be more productive and efficient. Location-aware printing means they don't have to waste time configuring or setting-up new devices, or scrolling through multiple printers and drivers already set-up on their laptop – instead they can get straight down to work.

Use HCP to modernize the print infrastructure in a way that suits your business, confident that it has the flexibility to accommodate your needs now and in the future.
